Art Unit: 2121

DETAILED ACTION

1. Claims 1-39 are presented for examination.

Priority

2. Acknowledgment is made of applicant's claim for foreign priority under 35 U.S.C. 119(a)-(d). The certified copy has been filed in the Application.

Information Disclosure Statement

3. The information disclosure statement (IDS) submitted on 1/29/2002 is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement being considered by the examiner.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-39 are rejected under 35 U.S.C. 102(b) based upon a public use or sale of the invention. Claims 1-39 are rejected under 35 U.S.C. 102(b) as being anticipated by Kondou et al. (US Patent 5,445,517).

. i \ 🔺

Application/Control Number: 10/057,955

Art Unit: 2121

As to claim 1-5, 14-18 and 27-31, Kandou teaches the invention including a combustion vibration estimating apparatus and a gas turbine plant comprising: an inputting unit which inputs limiting values of plant data, weather data and internal pressure variation, an internal pressure variation characteristic grasping unit which makes internal pressure variation of a combustor into a mathematical model from the input plant data and weather data, a combustion vibration region estimating unit which applies a limiting value of the internal pressure variation to the mathematical model obtained by the internal pressure variation characteristic grasping unit to obtain combustion vibration-prone to be generated region, and an outputting unit which outputs a combustion vibration region estimation result by the combustion vibration region estimating unit is taught as pressure variation of combustion noise is detected and pressure characteristic identified a corrected signal of combustion noise is computed and inputted to control the system (see, abstract and figures 3 and 10 and col. 3, lines 44-68) and a database which stores the plant data and the weather data input by the inputting unit into a time series, wherein the internal pressure variation characteristic grasping unit obtains data from the database to make the internal pressure variation of the combustor into the mathematical model is taught as an adaptive control is made using one signal detected by the other signal produced by passing the signal through a filter and corrected signal of a combustion noise is computed and result is inputted to a flow control (see, abstract and figures 2-4 and 10 and col. 3, lines 44-68 and col. 4, lines 16-47).

Page 4

Application/Control Number: 10/057,955

Art Unit: 2121

As to claim 6-13, 19-16 and 32-39, Kandou teaches the invention including a combustion vibration estimating apparatus and a gas turbine plant comprising: a combustor (see, abstract and figures 2-4 and 10); an inputting unit which inputs limiting values of plant data, weather data and internal pressure variation, as well as a restricting value of NOx, an internal pressure variation characteristic grasping unit which makes internal pressure variation of a combustor into a mathematical model from the input plant data and weather data, a NOx discharge amount characteristic grasping unit which makes an NOx discharge amount into a mathematical model from the input plant data and weather data, a safe region estimating unit which applies a limiting value of the internal pressure variation to the mathematical model obtained by the internal pressure variation characteristic grasping unit, and applies a restricting value of the NOx to the mathematical model obtained by the NOx discharge amount characteristic grasping unit, thereby obtaining a region where the NOx discharge amount is equal to or less than the restricting value and the combustion vibration is less prone to be generated. and an outputting unit which outputs a safe region estimation result by the safe region estimating unit (see, abstract and figures 2-4 and 10 and col. 3, lines 44-68 and col. 4, lines 16-47 and col. 8, lines 8-47).

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Art Unit: 2121

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ramesh B. Patel whose telephone number is 703-308-6673. The examiner can normally be reached on M-Th; 7:00 AM to 5:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Anil Khatri can be reached on 703-305-0282. The fax phone numbers for the organization where this application or proceeding is assigned are 703-308-9051 for regular communications and 703-305-3718 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-305-3900.
